HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew Holmes on 6/4/09.

The application has been amended as follows: Claim 1, line 9 reads, "aromatic pluester polyol". It has been amended to read, "aromatic polyester polyol".

Allowable Subject Matter

Claims 1 and 3-11 are allowed.

The following is an examiner's statement of reasons for allowance: The closest prior art is Li et al. (US 6,221,978) which describes a similar hot-melt adhesive, however without a long-chain aliphatic polyester polyol. However, claim 1, as amended, requires that aromatic polyester polyol (CII) be obtained from o-phthalic acid. Li teaches that, when employed, such polyols will be substantially free of phthalic acid or derivatives thereof (4:20-25), and defines phthalic acid as ortho-phthalic acid (2:45-47). This constitutes a clear teaching away from the claimed invention. Further search revealed two other pieces of art that are similar, namely Helmeke et al. (US 6,844,073) and Tangen (US 6,713,570), but do not anticipate or render obvious the claimed invention. Helmeke teaches a hot melt polyurethane wherein the polyol component includes an

amorphous polyester polyol based on phthalic acid, a liquid polyester polyol, and a crystalline polyester polyol (Abs). However, Helmeke is silent on the molecular weight and Tg of the amorphous polyester polyol based on phthalic acid, the crystalline polyester polyol has a Tg of less than 0°C, and the composition lacks an aliphatic polyether polyol. Furthermore, while Helmeke teaches the composition further comprising an amorphous polyester polyol with a Tg of from 0 to 50°C, this does not overlap with sufficient specificity to render obvious the claimed range of 40°C or more for component C1.

Tangen, on the other hand, teaches a hot melt polyurethane adhesive comprised of multiple prepolymers, each reacted with a different polyol component (Abs). The polyols are an aliphatic polyester polyol (3:15-17), a polyether polyol (3:28-30), and an amorphous polyester having a Tg of lower than about -20°C (3:40-53), which may be prepared from orthophthalic acid (4:10-15). However, Tangen lacks an aromatic polyester polyol with a Tg of 40°C or more, and the structure is substantially different from the claimed invention. Because Tangen uses separate prepolymers with different precursors, the polyol precursors will be separated in distinct sections of the adhesive, and will not be randomly distributed, as is the case in the instant invention where the polyols are all part of one prepolymer.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
